AQT UNIT 2, 3

Claims 1-5, 9 and 12-16 are rejected under 35 USC 103 as being unpatentable over Tanuma in view of Nakane for the reasons set forth in the previous office action (10-4-04).

Claims 6, 8, 11, 17 and 19 are rejected under 35 USC 103 as being unpatentable over Tanuma in view of Nakane and combined with Suzuki for the explicit reasons stated in the previous office action (10-4-04).

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 20-22 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. A parallel connected capacitor critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). Applicants specification, original claims as well as the arguments contained in the most recent amendment (12-14-04) indicate the criticality of the compensation capacitor is in its parallel connection with the piezo element as opposed to a series connection.

Regarding applications remarks. Firstly, it is noted that new claims 20-22 do not correspond to objected claim 7, 10 and 18 presented in independent form. As noted above, they clearly fail to include that the compensation capacitor is parallel connected.

Applicant marks an interesting point regarding Nakane fig. 12 and the presence of inductor #21. However, the inductor #21 is also used in the fig. 13 circuit which teaches an alternate wherein the compensation capacitor #42 is connected in series.

Thus, inductor #21 is a constant, ~~not~~ in both parallel and series alternatives and thus not unique or essential to only the parallel version. Indeed, for both series and parallel connections, the capacitive value of the inductor #21 must be low. Nothing would be lower than elimination of the inductor (see Nakane col. 8⁵ lines 30-59).

Claims 7, 10 and 18 remain objected to.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
